## Supported Software Applications and Tools

### Overview

The Supported Software Applications and Tools list is a resource for school leaders, teachers, district administrators, and support staff to let them know what software, apps, and other technology solutions are supported and recommended.

### Software Support Levels

#### Managed Software Applications and Tools

Applications that have been fully vetted and reviewed by the district. Software in this category have signed contracts and data confidentiality agreements. These applications can store staff and student data, including student rosters. These applications may also store non-directory level student data.

Starting in the 2019/2020 school year all district supported applications must have a completed Business Justification Document and have gone through a comprehensive review by the Technology Management Committee.

#### Reviewed/Not Supported Applications and Tools

Applications in this category are available on the Student Resource or Staff Resource pages of the district website.

Applications in this category have been reviewed by either the district curriculum office (if a Student Resource) or the information technology department (if a Staff Resource). These tools *do not* store student or staff data.

Use of educational resources and entry of individual identifiable data into systems which have not been reviewed to ensure security and compliance with privacy requirements may be in violation of district policy, and state and federal privacy laws. Further, such actions may be considered a violation of professional ethics.

#### Unsupported Applications and Tools

Applications that have not been reviewed or recommended for use. If used, these applications *should not* store student or staff data. The district provides no support for these tools and assumes no responsibility for the information contained within.

Use of educational resources and entry of individual identifiable data into systems which have not been reviewed to ensure security and compliance with privacy requirements may be in violation of district policy, and state and federal privacy laws. Further, such actions may be considered a violation of professional ethics.
